**A Report on
Save Electricity Week In Campus**

Date: 09/02/26-14/02/26

Introduction

Electricity plays a vital role in our daily lives. It is used for lighting, operating machines, charging devices, and many other purposes. However, excessive and careless use of electricity leads to wastage of energy and depletion of natural resources. To create awareness among students and staff about the importance of conserving electricity, a **Save Electricity Awareness Program** was organized on our campus.

The program aimed to educate everyone about the responsible use of electricity and encourage people to adopt energy-saving habits in their daily lives.

Objectives of the Program

The main objectives of organizing the Save Electricity program were:

- ✓ To create awareness about the importance of energy conservation.
- ✓ To encourage students to reduce unnecessary electricity usage.
- ✓ To promote the use of energy-efficient appliances.

Inauguration of the 'Save Electricity' campaign by our Honorable Principal Sir.

Program Details

The event began with a welcome address by the program coordinator. The coordinator explained why saving electricity is important for the future of our planet. Students and teachers from different departments attended the program and showed great interest.

A special speech was delivered by one of the faculty members, who explained how electricity is produced and how excessive use leads to the depletion of natural resources such as coal and water. The speaker also highlighted the environmental impacts of electricity generation, including pollution and global warming.

Students and Green Mitra Coordinator together promoting the Save Electricity campaign.

Classroom awareness session on saving electricity with faculty coordinator and students.

Classroom Awareness Campaign

As part of the Save Electricity program, an awareness campaign was conducted in each classroom of the campus. Students and volunteers visited different classes to explain the importance of saving electricity and using energy responsibly. They shared simple and practical tips such as switching off lights, fans, and electronic devices when they are not in use.

During the campaign, students also displayed posters and shared slogans related to electricity conservation. Short talks were given to explain how saving electricity helps protect natural resources and reduce environmental pollution.

The classroom campaign helped spread the message of energy conservation to a large number of students. It encouraged everyone to develop good habits and take responsibility for saving electricity both in the campus and at home. The campaign was very effective and received positive participation from students and teachers.

Students spreading awareness about saving electricity through campaigns in each classroom.
