FDP Content Overview

Dr.V.S.S.N.GOPAL PULLABHATLA presentation focused on “The RSA Public key Cryptosystem”

- The data that needs to be protected when transmitted

Public Key Encryption Scheme-Syntax

➤ A private key encryption scheme is a tuple of probabilistic polynomial-time algorithms (Key Generation, Encryption, Decryption) such that:

1. **Key Generation:** This algorithm Gen takes as input the security parameter 1^n and outputs a key k ; we write this as $k \leftarrow Gen(1^n)$ (thus emphasizing the fact that Gen is a randomized algorithm). We will assume without loss of generality that any key k output by $Gen(1^n)$ satisfies $|k| \geq n$.

- Asymmetric cryptography, these systems use two different keys, one public and one private. The public key is used to encrypt, and the private key is used to decrypt. An example of a public-key cryptosystem is RSA.

The RSA Public Key Encryption Scheme

The RSA (Rivest, Shamir, Adleman won Alan Turing Award 2002) cryptosystem-1977 involves the following algorithms.

➤ **Key generation:** Each entity creates an RSA public key and a corresponding private key. Each entity A should do the following:

- Generate two large random (and distinct) primes p and q , each roughly the same size.
- Compute $n = pq$ and $\phi = (p - 1)(q - 1)$.
- Select a random integer e , $1 < e < \phi$ such that $\gcd(e, \phi) = 1$.
- Use the extended Euclidean algorithm to compute the unique integer d , $1 < d < \phi$, such that $ed \equiv 1 \pmod{\phi}$.
- A 's public key is (n, e) ; A 's private key is d .

The RSA Public Key Encryption Scheme

The RSA (Rivest, Shamir, Adleman won Alan Turing Award 2002) cryptosystem-1977 involves the following algorithms.

- **Key generation:** Each entity creates an RSA public key and a corresponding private key. Each entity A should do the following:

- Choose two large prime numbers p and q .
 - To make factoring harder, p and q should be chosen at random, be both large and have a large difference.^[1] For choosing them the standard method is to choose random integers and use a primality test until two primes are found.
 - p and q are kept secret.

Mathematical Prerequisites:

- **Divisibility:** A nonzero b divides a , if $a = mb$ for some m , where a , b and m are integers. Clearly, 13 divides 91, as there exists 7 such that $91=7(13)$.
- **Greatest common divisor:** It is the largest integer that divides both a and b , denoted by $\gcd(a,b)$.
- **Division with remainder:** Let a and b be positive integers. Then, we say that a divided by b has quotient q and remainder r if $a = bq + r$ with $0 \leq r < b$. The values of q and r are uniquely determined by a and b .
Say, for 65 and 24, we have $65 = 24 \times 2 + 16$, i.e., on

Key Takeaways

Security

A cryptosystem should be secure and face scrutiny from the security community. The only things that should be secret are the keys.

Key length

The length of a key is a major factor in the security of a cryptosystem. Longer keys are generally more secure.

Symmetric and asymmetric encryption

Symmetric encryption uses a single key to encrypt and decrypt data. Asymmetric encryption uses a public key to encrypt data and a private key to decrypt it.

Digital signatures

Digital signatures can prove the authenticity and integrity of information. They can also confirm the accountability of the sender of a message.

Nonrepudiation

Nonrepudiation is the idea that a sender cannot deny sending a message or a recipient cannot deny receiving it.

Scalability

Scalable blockchains can increase transaction capacity and reduce fees. This can lead to new on-chain applications.

Conclusion

The FDP provided valuable insights into the latest trends and technologies in cryptology, equipping participants with the knowledge to foster future research and development in their institutions. The involvement of a distinguished Professor Dr.V.S.S.N.GOPAL PULLABHATLA added immense value to the program, making it an enriching experience for all attendees.

Acknowledgments

The success of the FDP would not have been possible without the active participation of the 186 faculty members and the support from the organizing committee. Special thanks to Dr.V.S.S.N.GOPAL PULLABHATLA for his expert guidance and for taking the time to share his knowledge.
